Risks

The main risks of this UCITS are:

- Capital risk
- Credit risk
- Credit risk linked to investment in speculative securities
- Risk linked to the SRI (Socially Responsible Investing) selection
- Interest rate risk

GENERAL INFORMATION

Investment objective and SRI approach

The UCITS aims to outperform its benchmark index over the recommended investment period through investments on the corporate bond markets that seek to combine financial profitability and the implementation of a sustainable development policy in return for a risk of capital loss.

PERFORMANCES

Performance (Basis 100 - Net of fees)

Benchmark (Index) : Bloomberg Barclays Euro Aggregate Corporates TR (EUR)

The benchmark has changed since this UCI was created. The performance data for the benchmark has been chain-linked in order to take the successive changes into account.

Past performance is not an indication of future performance. It may vary over time. Reported performance does not take into account costs and fees on issues and redemptions of units, but does include ongoing charges and intermediary fees as well as any performance fees charged.

Each stock is awarded an ESG rating within Edmond de Rothschild Asset Management (France). To reach an ESG rating, the investment team conducts in-depth fundamental analysis which involves meeting the company's executive management. The team uses quantitative and qualitative estimations sourced from companies, extra-financial rating agencies and brokers. Each stock is rated according to a 7-point scale from CCC to AAA. Only the best ratings - AAA, AA and A - are eligible for the portfolio. Ratings are revised regularly.

GLOSSARY

The VOLATILITY of a security is the difference between performance and average performance and therefore makes it possible to gauge the consistency of performance obtained. It comprises a measure of risk. If this is zero, the individual performances are identical. The higher it is, the greater the difference between individual performances.

The TRACKING ERROR shows the volatility of a funds relative performance against that of its benchmark. It shows the difference between performances and their average and so makes it possible to gauge the consistency of relative performance. The lower the tracking error, the closer the funds performance is to that of its benchmark.

The ALPHA corresponds to the funds average performance. More specifically, it measures the fund managers added value while cancelling out market influence, which cannot be controlled. This measure is expressed as a percentage.

The SHARPE RATIO shows the funds outperformance against a zero-risk interest rate, adjusted for fund volatility.

Other definitions and methodologies are available in our fund center at www.edmond-de-rothschild.com, under the heading "Funds".
