The risk indicator SRI rates this fund on a scale of 1 to 7. This indicator is used to assess the level of risk of this product in comparison to other funds and a category 1 rating does not mean that the investment is risk free. In addition, it indicates the likelihood that this product will incur losses in the event of market movements or our inability to pay you. This indicator assumes that you hold the product until the end of the recommended holding period of this fund. The actual risk may be very different if you choose to exit before the end of the recommended holding period of this Fund.

## GENERAL INFORMATION

### Investment objective and SRI approach

The Product's objective is to achieve better annual performance (net of management fees) than its benchmark index - the MSCI EMU Small Cap Index with net dividends reinvested - mainly through exposure to the market for small- and mid-cap companies in Europe. These companies will be selected on the basis of an analysis that combines financial profitability and compliance with non-financial criteria. In this respect, through its investments, the Product aims to promote job creation over cycles spanning 3 to 5 years, based on the Management Company's analyses, and, in doing so, contribute to the development of small- and mid-cap companies in Europe. The Product is managed actively, which means that the Manager makes investment decisions as to the selection of assets, without restrictions on sector allocation or geographical location.

## PERFORMANCES

### Performance (Basis 100 - Net of fees)

**Benchmark (Index) :** MSCI EMU Small Cap NR (EUR)

Past performance and volatility are not indicative of future performance and volatility and are not constant over time. In particular, they may be independently affected by changes in exchange rates. The performance data does not take into account costs and fees incurred on the issue and redemption of units, but does include ongoing charges, intermediary fees and any performance fees charged.

Fund	3.28
------	------

Climate alignment (°C): the global warming trajectory (°C) of each company in the portfolio based on its carbon footprint (scopes 1, 2 and 3\*), the efforts undertaken to reduce it and the strategy announced to contribute to the fight against global warming. The trajectory is derived from the individual company's performance compared to a warming trajectory of the global economy of 1.5°C. The trajectories of the companies in the portfolio are then aggregated. Ratios as of 28/02/2025

## RISKS

The risks listed below are not exhaustive (Please refer to the prospectus for more details):

### Inflation risk

The UCITS will be exposed to risks linked to inflation, i.e. an overall rise in prices. The level of inflation affects changes in interest rates and therefore money market instruments.

### Equity risk

The value of a share may vary as a result of factors related to the issuing entity but also as a result of external, political or economic factors. Fluctuations in the equity and convertible bond markets, whose performance is in part correlated with that of the underlying equities, may lead to substantial variations in the net assets, which could have a negative impact on the performance of the Sub-fund's net asset value.

### Capital risk

The Sub-fund does not guarantee or protect the capital invested, so investors may not recover the full amount of the capital they initially invested, even if they retain the shares for the duration of the recommended investment period.

### Liquidity risk

The markets in which the Sub-fund trades may occasionally be affected by a lack of liquidity. These market conditions may affect the prices at which the Sub-fund may have to liquidate, initiate or modify positions.

### Equity Risks associated with small and mid caps

Securities of small- and mid-cap companies may be significantly less liquid and more volatile than those of largecap companies. As a result, the Sub-funds net asset value may fluctuate significantly and more rapidly.

### ESG risks

The integration of ESG and sustainability criteria into the investment process may exclude securities from certain issuers on non-investment grounds and, consequently, certain market opportunities that are available to funds that do not use ESG or sustainability criteria may not be available to the Sub-fund, and the Sub-fund's performance may at times be better or worse than that of comparable funds that do not use ESG or sustainability criteria. Asset selection may be based in part on a proprietary ESG rating process or on exclusion lists ("ban lists") which are partly based on third-party data. The lack of common or harmonised definitions and labels that incorporate ESG and sustainability criteria at EU level may cause managers to adopt different approaches when defining the ESG objectives and determining whether these objectives have been achieved by the funds they manage. This also means that it may be difficult to compare strategies that include ESG and sustainability criteria, given that the selection and weightings applied to the selected investments may, to some extent, be subjective or based on indicators that may share the same name, but whose underlying meanings are different. Investors are advised that the subjective value that they may or may not assign to certain types of ESG criteria may differ substantially from the Financial Manager's methodology. The lack of harmonised definitions may also result in certain investments not benefiting from preferential tax regimes or tax credit schemes, as a result of ESG criteria being valued differently than initially envisaged.

## DEFINITIONS AND METHODOLOGIES

The definitions and methodologies below are not exhaustive and are available in more detail at [https://medianet.edmond-de-rothschild.fr/edram/pdf/Methodology\\_en.pdf](https://medianet.edmond-de-rothschild.fr/edram/pdf/Methodology_en.pdf) and if applicable at <https://funds.edram.com/> in the fund's downloadable documentation.

The VOLATILITY of a security is the difference between performance and average performance and therefore makes it possible to gauge the consistency of performance obtained. It comprises a measure of risk. If this is zero, the individual performances are identical. The higher it is, the greater the difference between individual performances.

The TRACKING ERROR (available if the fund has a benchmark index) shows the volatility of a fund's relative performance against that of its benchmark. It shows the difference between performances and their average and so makes it possible to gauge the consistency of relative performance. The lower the tracking error, the closer the fund's performance is to that of its benchmark.

The ALPHA (available if the fund has a benchmark index) corresponds to the fund's average performance. More specifically, it measures the fund managers' added value while cancelling out market influence, which cannot be controlled. This measure is expressed as a percentage.

The SHARPE RATIO shows the fund's outperformance against a zero-risk interest rate, adjusted for fund volatility.
